

1. Multi form wizard vs long form for personal info
2. Stripe integration: specify amount and payment on the same page or different page
3. Do we have to guide the users through the interface?
4. Security concern (fake projects for getting money from alums)
  - Advisor contact information (email or phone number)
  - Terms of agreement
5. Notification feature (through emails)
6. How to handle students that graduate? what happens to projects they are involved in?  
What access rights to take away?

#### PROGRESS:

1. Deleted unnecessary CSS files.
2. Deleted excess Javascript files.
3. Removed unnecessary helper files.
4. Decided to use wicked gem for form wizard
5. Decided to implement redirection to the main payment page when clicking donation button. Instead of using default Stripe payment stripe, all the necessary forms are custom generated along with terms of agreement (responsibility of backing projects)
6. Decided to implement email notification instead of separate notification feature within the app.
7. Decided to wait for two years after students graduate to make sure they complete their projects. Then we lock down their student accounts and encourage them to create alum accounts.
