

# **Critique for AAA**

Team Next Door

# Good

- Interesting problem
  - Novel
  - Presented well
- Preliminary data model
  - Demonstrates understanding of problem and provides reasonable solution
- Thorough design risks
  - Demonstrates understanding of possible complications

# Data Model

- Alumnus -> Project
  - Consider making the viewer relationship stronger
    - alum not only views a project, but also sponsors
  - If viewing is a relationship, should include a history set of all projects viewed?
- Alum -> Update
  - Monitor relationship seems redundant
    - alum gets update through project
- Project -> Update
  - Update should be tied to a single project not zero or more?

# Concepts

- Alumnus-Donor
  - Are alumnus and donor synonymous or are donors subsets of alumnus?
